CleanNet USA is one of the very few companies that uses internally developed software programs to monitor quality levels at each site. Custom software with built-in computer driven controls are tools that allow us to monitor any deficiencies and respond in an appropriate manner, not only resolving the problem but also

retraining the individuals performing the task to prevent it from recurring. We also include log books, beepers, and a toll-free hot

line. Our goal is to monitor performance from the customer's perspective.

All CleanNet USA personnel are fully screened and trained at our own facilities prior to being permanently assigned to specific buildings.
